

CHRIS TANAKA

SENIOR SOFTWARE ENGINEER

Miami, FL | (425) 565-3249 | christ5653249@gmail.com | www.christtanaka.life

PROFESSIONAL SUMMARY

Senior Software Engineer with 12+ years of experience building scalable, user-centered web applications and full-stack platforms across AI, SaaS, property technology, healthcare, and advertising. Deep expertise in React, Next.js, TypeScript, Node.js, Python, and Java, with a track record of owning end-to-end delivery for real-time, data-intensive, and AI-powered systems. Technical leader who partners effectively with product, design, data, and infrastructure teams to improve performance, reliability, security, and developer velocity.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, SQL, PHP

Frontend: React, Next.js (Pages and App Router), Vue.js, AngularJS, Redux, React Query, Zustand, Tailwind CSS, Material UI, styled-components, responsive design, WCAG accessibility

Backend and APIs: Node.js, Express.js, NestJS, GraphQL, REST APIs, WebSocket APIs, OAuth 2.0, JWT, SSO

Data and Messaging: PostgreSQL, MySQL, MongoDB, Supabase, Firebase, LiveGraph, RabbitMQ, Kafka, data pipelines, event-driven architecture

AI and LLM Systems: RAG, multimodal systems, AI inference pipelines, OpenAI integrations, LangChain, LangGraph, Pinecone, FAISS

Cloud and DevOps: AWS, GCP, Azure, Docker, Kubernetes, Terraform, GitHub Actions, Jenkins, Grafana

UI Engineering: UI performance optimization, rendering and reconciliation, responsive development, cross-browser compatibility, design systems, Figma Dev Mode, Code Connect

Leadership and Delivery: Technical leadership, mentorship, cross-functional collaboration, Agile, Scrum, Kanban, rapid prototyping, pair programming

PROFESSIONAL EXPERIENCE

ProductNow | Senior Software Engineer

October 2025 - Present

- Build an AI-native operating system for product and engineering teams that connects strategy, requirements, planning, and execution in a shared intelligence layer updated in real time.
- Design and ship agentic AI teammates that integrate with existing workflows to reduce coordination overhead across alignment, planning, handoffs, and status reporting.
- Own end-to-end feature delivery in a TypeScript monorepo using Next.js and NestJS, with an emphasis on clear UX, responsive performance, reliability, and maintainable architecture.
- Strengthen enterprise readiness through Auth0 identity and SSO, Vanta security monitoring, auditability, and access controls supporting SOC 2 Type II readiness.
- Partner with product and design to translate ambiguous strategy into practical workflow primitives spanning roadmaps, sprint planning, and delivery.
- Balance rapid product iteration with maintainable architecture, responsive performance, and production reliability in a fast-moving startup environment.
- Develop reusable frontend and backend patterns within the shared monorepo to improve consistency across AI-assisted workflows and service integrations.
- Apply iterative prototyping and hands-on technical collaboration to turn new product concepts into testable, production-ready capabilities.

FoxyAI | Senior Software Engineer

December 2023 - September 2025

- Built and maintained Next.js and TypeScript dashboards for AI-powered property intelligence, including condition and quality scoring, damage detection, renovation forecasting, and 360-degree valuations.
- Led migration from the Next.js Pages Router to the App Router, streamlining routing and data fetching while improving responsiveness and the overall user experience.
- Integrated multimodal, LLM-powered search using retrieval-augmented generation, enabling image and text queries across large property datasets with more relevant, context-aware results.
- Developed full-stack data flows from image ingestion and AI inference through user-facing visualization, prioritizing speed, reliability, and product alignment.
- Implemented subscription billing with Stripe Checkout and a customer portal for plan management, invoices, and payments.
- Worked across frontend, backend, and AI workflows to translate complex property data and model outputs into clear, practical user experiences.
- Created reusable interface patterns for complex AI results across property condition, damage, renovation, and valuation workflows.

CHRIS TANAKA

SENIOR SOFTWARE ENGINEER | PROFESSIONAL EXPERIENCE (CONTINUED)

Figma | Senior Full-Stack Engineer

May 2019 - December 2023

- Built and maintained platform engineering systems that supported product reliability, scalability, observability, and developer velocity in a large-scale collaborative SaaS environment.
- Delivered full-stack features and internal tooling across React and TypeScript interfaces and backend services, giving product teams safer, reusable platform capabilities.
- Improved data flow, service reliability, performance, and system observability while supporting high-traffic product areas and resolving production issues.
- Partnered across product, design, and engineering to improve shared infrastructure and internal workflows used to monitor systems and operate the platform.
- Built React and TypeScript interfaces and backend integrations that helped internal teams manage workflows, monitor systems, and improve engineering operations.
- Developed reusable platform patterns that reduced duplication and gave product teams more consistent foundations for shipping and operating features.

ElectrifAi | Software Engineer

December 2016 - April 2019

- Delivered client-facing and internal applications across healthcare, data analytics, and enterprise workflow automation.
- Developed React and TypeScript frontend applications, including healthcare interfaces supporting electronic medical record workflows and operational visibility.
- Built backend integrations and data-processing features connecting application interfaces with structured healthcare and business data sources.
- Translated complex stakeholder requirements into usable web applications in partnership with product managers, data teams, and client stakeholders.
- Improved performance, maintainability, and reliability by refactoring legacy UI components, strengthening API integrations, and resolving production issues.
- Supported delivery across requirements analysis, implementation, integration troubleshooting, and production support for client-facing applications.

Google | Software Developer

December 2013 - November 2016

- Joined as a Software Engineering Intern and delivered production feature work under mentorship during a six-month internship.
- Converted to a full-time Software Engineer role after demonstrating strong ownership and delivering high-impact features early in the engagement.
- Developed internal web tools and A/B experimentation infrastructure using AngularJS and Java for high-volume advertiser platforms.
- Collaborated with product and analytics teams to build scalable UI components and experimentation frameworks that improved engineering velocity.
- Built reusable AngularJS interface components and Java-backed integrations for internal advertiser tooling and experimentation workflows.

EDUCATION

The University of Tokyo | Master's Degree in Computer Science | April 2011 - March 2013

The University of Tokyo | Bachelor's Degree in Computer Science | April 2007 - March 2011

ADDITIONAL EXPERTISE

- Frontend engineering: UI performance optimization, rendering and reconciliation, responsive development, cross-browser compatibility, accessibility (WCAG), and CSS-in-JS.
- Design systems and developer tooling: Material UI, Bootstrap, styled-components, Figma Dev Mode, Code Connect, and reusable component systems.
- Engineering delivery: Agile, Scrum, Kanban, rapid prototyping, pair programming, CI/CD, production support, and fast-paced startup environments.
- Leadership and collaboration: technical direction, end-to-end feature ownership, mentorship, and partnership across product, design, data, and engineering teams.
- Platform and product systems: platform engineering, internal developer tools, A/B experimentation, observability, subscription billing, and enterprise security readiness.
- Application security: OAuth 2.0, JWT, SSO, Auth0, access controls, auditability, continuous security monitoring, and SOC 2 Type II readiness.
- Real-time architecture: WebSocket APIs, GraphQL subscriptions, RabbitMQ, Kafka, data pipelines, event-driven systems, and service integrations.
