SUMMARY

Sr. Software Engineer with 12+ years of experience building high-performance, user-centric web applications. Deep expertise in React, Next.js, and TypeScript, with strong backend experience designing real-time, data-intensive and AI-powered systems. Proven collaborator and technical owner, delivering scalable products in fast-paced startup and large-scale production environments.

EDUCATION

The University of Tokyo

Master's degree in CS

04/2011 - 03/2013

The University of Tokyo

Bachelor's degree in CS

04/2007 - 03/2011

SKILLS

Languages & Frameworks

- JavaScript/TypeScript
- Python
- Java
- SQL
- React.js
- Next.js (Page & App Router)
- Vue.js
- Angular.js
- Node.js
- ExpressJS
- NestJS
- GraphQL
- REST APIs
- WebSocket APIs
- PHP

EXPERIENCE

ProductNow

Senior Software Engineer | 10/2025 - Present

- Built an AI-native operating system for product & engineering teams, connecting plans, requirements, and execution into a shared intelligence layer that stays current in real time.
- Developed agentic "AI teammates" that plug into existing workflows to reduce coordination overhead (alignment, planning, handoffs, status updates).
- Shipped end-to-end features in a TypeScript monorepo stack (Next.js/NestJS), with a strong focus on UX clarity, performance, and reliability.
- Contributed to enterprise readiness: identity/SSO via Auth0, continuous security posture monitoring via Vanta, and auditability/access controls supporting SOC 2 Type II readiness.
- Partnered closely with product and design to translate messy strategy into crisp workflow primitives (strategy → roadmap → sprint planning → delivery).

FoxyAI

Senior Software Engineer | 12/2023 - 09/2025

- Built and maintained Next.js/TypeScript dashboards to visualize AI-powered property intelligence (condition/quality scores, damage detection, renovation forecasts, and 360° valuations).
- Led frontend modernization and performance optimization by upgrading from Next.js Page Router to the App Router, streamlining routing and data fetching, and significantly improving responsiveness and user experience.
- Integrated a multimodal, LLM-powered advanced search using a Retrieval-Augmented Generation - RAG system, enabling intuitive image-and-text queries across large-scale property datasets and delivering more accurate, context aware results.
- Developed full-stack data flows from image ingestion through AI inference to visual output, ensuring speed, reliability, and alignment with product goals.
- Implemented a subscription and billing system using Stripe Checkout and a customer portal for plan management, invoices, and payments.

Frontend Development

- UI Performance Optimization
- Rendering & Reconciliation
- Redux
- React Query
- Zustand
- TailwindCSS
- Styled Components
- CSS-in-JS
- Material UI
- Bootstrap
- Figma Dev Mode
- Code Connect
- Simple Design System
- Accessibility (WCAG)
- Responsive Development
- Cross-Browser Development

Backend & Databases

- Postgres
- MySQL
- MongoDB
- Supabase
- Firebase
- LiveGraph
- GraphQL Subscriptions
- Data Pipelines
- RabbitMQ
- Kafka
- Event-Driven Architecture
- OAuth2
- JWT
- SSO

Cloud & DevOps

- AWS
- GCP
- Azure
- Docker
- Kubernetes
- Terraform
- GitHub Actions
- Jenkins
- Grafana

Figma

Senior Full-Stack Engineer | 05/2019 - 12/2023

- Worked on Figma's platform engineering team, building and maintaining internal systems that supported product reliability, scalability, and developer velocity.
- Developed full-stack features and internal tooling across frontend and backend services, helping product teams ship faster with safer, reusable platform capabilities.
- Contributed to platform improvements around data flow, service reliability, performance, and system observability in a large-scale collaborative SaaS environment.
- Partnered with cross-functional teams to support high-traffic product areas, debug production issues, and improve the stability of shared infrastructure.
- Built and maintained React/TypeScript interfaces and backend integrations used by internal teams to manage workflows, monitor systems, and improve engineering operations.

ElectrifAi

Software Engineer | 12/2016 - 04/2019

- Worked on multiple client-facing and internal software projects across healthcare, data analytics, and enterprise workflow automation.
- Developed React and TypeScript frontend applications, including healthcare-related interfaces used to support EMR workflows and operational visibility.
- Built backend integrations and data-processing features to connect application interfaces with structured business and healthcare data sources.
- Collaborated with product managers, data teams, and client stakeholders to translate complex requirements into usable web applications.
- Improved application performance, maintainability, and reliability by refactoring legacy UI components, strengthening API integrations, and supporting production issue resolution.

Google

Software Developer | 12/2013 - 11/2016

- Joined as a Software Engineering Intern, collaborating on production projects and delivering feature work under mentorship over a 6-month period.
- Transitioned to a full-time Software Engineer after internship conversion, demonstrating strong ownership and delivering high-impact features early on.
- Developed internal web tools and A/B experimentation infrastructure using AngularJS and Java to support high-volume advertiser platforms.
- Collaborated across product and analytics teams to build scalable UI components and experimentation frameworks, accelerating engineering velocity.

AI/LLM & Advanced Systems

- RAG
- Multimodal systems
- AI Inference Pipelines
- OpenAI Integration
- LangChain
- LangGraph
- Pinecone
- FAISS
- Cursor

Collaboration & Leadership

- Agile
- Scrum
- Kanban
- Cross-Functional Collaboration
- Mentorship
- Technical Leadership
- Rapid Prototyping
- Startup Environment
- Pair-programming
